1150-CLEAR
Resin-Based, Water Emulsion Concrete Curing Compound

DESCRIPTION
1150-CLEAR water-based concrete curing compound is formulated from hydrocarbon resins and may be used on interior, exterior, vertical, and horizontal concrete surfaces. Once applied, it forms a liquid membrane that retains an optimum amount of water present in freshly placed concrete to allow complete hydration of the cement. NOTE: After approximately four weeks, the membrane begins to chemically break down. When the curing cycle is complete, the membrane will eventually wear off the surface. This process usually takes another three to five weeks under normal traffic and weathering conditions.

USES
1150-CLEAR can be used on both interior and exterior applications where paint, resilient tile, or resilient flooring will be applied. Because of the wide variety of paints and adhesives for carpeting and resilient tile in use, contact the manufacturer of the flooring system for application approval on substrates containing residual resin-type curing compounds. A small test application is also recommended.

FEATURES/BENEFITS
- Improves resistance to the abrasive and corrosive actions of salts and chemicals … minimizes excessive shrinkage.
- Can be applied quickly and easily with conventional, commercial spray equipment.
- VOC compliant.
- Formulations also available with red fugitive dye added.

PACKAGING
5 Gallon Pails
55 Gallon Drums

COVERAGE
Approximately 200 ft.²/gal. Coverage is approximate and may vary depending on surface finish/texture, concrete condition, climatic conditions, etc. Always apply to a test area first to determine actual coverage rate before full-scale application.

SHELF LIFE
When stored indoors in original, unopened containers at temperatures between 40° - 90° F, optimum performance and best use is obtained within one year of date of manufacture.

SPECIFICATIONS
- ASTM C 309, Type I, Class A & B (Type 1-D also available)
- AASHTO M 148, Type I, Class A & B (Type 1-D also available)
- Complies with U.S. EPA, OTC Phase I and Phase II, SCAQMD, and all other current North American VOC regulations.

TECHNICAL DATA
VOC Content: 42 g/L

CONTINUED ON REVERSE SIDE …
APPLICATION

Mixing ... For optimum performance, gentle mixing or agitation is recommended. CAUTION: TO AVOID FOAMING, DO NOT MIX EXCESSIVELY. In the container, 1150-CLEAR appears ivory in color. However, it dries to a clear, transparent coating with a very slight amber tint.

Application Method ... Application equipment must be clean and free of any previously used materials. Apply in a uniform film to horizontal surfaces as soon as the surface water disappears and the surface will not be marred by walking workmen. On vertical surfaces, apply promptly after the forms are removed. 1150-CLEAR may be applied with a typical commercial hand or power sprayer, such as a Chapin 1949. Use a spray tip that produces a flow of 0.5 GPM under 40 psi (.276 MPa) of pressure.

Drying Time ... Typically dries in 1 - 2 hours, depending on jobsite conditions (temperature, wind, etc.) Restrict foot traffic for at least four hours. Twelve hours is preferable.

Cleanup ... Prior to drying, cleanup can be accomplished with soap and water. Once dried, it will be necessary to clean up with mineral spirits or other suitable petroleum distillate.

PRECAUTIONS

KEEP FROM FREEZING. Do not apply if concrete temperature is less than 40˚ F. DO NOT MIX WITH COMPOUNDS CONTAINING SOLVENT – SEPARATION WILL OCCUR. DO NOT ADD OR DILUTE WITH ANY OTHER COMPOUND. SURFACE MAY DISCOLOR AND/OR YELLOW DUE TO OVER-APPLICATION. Do not paint or apply resilient flooring over any 1150-CLEAR cured surface without first checking the specifications and securing the approval of the paint or resilient flooring manufacturer.

HEALTH AND SAFETY

Direct contact may result in mild irritation. Refer to Safety Data Sheet for complete health and safety information.

LEED INFORMATION

May help contribute to LEED credits:
- EQc2: Low-Emitting Materials [For Healthcare and Schools (exterior-applied products) ONLY]
