

HYDRASTOP™ SA

Pre-Applied Waterproofing Membrane

Self-adhering waterproofing membrane for vertical blindside applications

HYDRASTOP SA is an effective solution for applications where access to the site requires a pre-applied waterproofing membrane prior to pouring the foundation walls.

HYDRASTOP SA waterproofing membrane is used in vertical applications where access to the site requires a pre-applied waterproofing membrane prior to pouring the foundation walls.

The product is a composite, self-adhered sheet membrane comprised of a non-woven fabric, elastomeric membrane, and coated release paper. Once concrete is poured against **HYDRASTOP SA** and the concrete cures, a mechanical bond forms that secures the concrete to the membrane. This strong mechanical bond provides effective and durable waterproofing of the structure.

To complete the full **HYDRASTOP SA** waterproofing system, MEL-DRAIN™ composite drainage board from W. R. MEADOWS must be used. This complete system blocks water intrusion while also draining water away from the structure. Both products, used in conjunction, will create an effective shield from water intrusion.
