

PENCURE™ OTC

Proprietary, Dual-Action, Curing and Sealing Compound for Fresh Concrete

Unique dual-action formulation cures freshly placed concrete and reduces the intrusion of water and salt penetration.

When used on fresh concrete, PENCURE OTC cures the concrete and performs similar to a post 28-day penetrating sealing compound application, offering less down time and reduced installation cost compared to what multiple coats require.

PENCURE OTC is a unique, dual-action, non-yellowing, acrylic, concrete curing and sealing compound containing silane. PENCURE OTC is intended for use on fresh concrete only. The product is clear, transparent, and easy to apply. PENCURE OTC has been formulated to simultaneously form a membrane and penetrate into the surface of the concrete to protect the concrete and also reduce the intrusion of salt and water.

PENCURE OTC minimizes hair checking, cracking, dusting, spalling, scaling, and other defects common to improperly cured or uncured concrete. It is designed for driveways, parking lots, patios, and anywhere you want to protect fresh, broom finished, exterior gray concrete.

FEATURES/BENEFITS:

- Breathable film regulates moisture evaporation in cured concrete
- Single-step application offers “one-and-done” installation
- Complete projects faster with reduced downtime
- Provides a clear film that will not yellow
- Provides low-gloss/satin appearance
- Meets and exceeds various DOT requirements for NCHRP Report 244 Series II and IV (Southern Exposure) when used on fresh concrete
