PRINTED IN USA 08/24-400 #SS-23

When applied to fresh concrete, SIL-CRETE helps to reduce water evaporation and improves the surface integrity of the concrete. It is residue-free and contains no wax, resin, or other materials that would inhibit the bond of subsequent coatings and/or treatments.

SIL-CRETE is recommended for use wherever cured and densified freshly troweled concrete is required, or existing concrete is needing sealing and densification. Ideal applications include floors in restaurants, industrial plants, warehouses, etc.

#### **FEATURES/BENEFITS:**

- Densifies and dustproofs concrete surfaces.
- Does not inhibit adhesion of subsequent coatings and other topical treatments.
- Will not discolor, yellow, peel, or flake.
- VOC compliant.
- Dustproofs and improves abrasion resistance of treated surfaces
