## **EVAPRE Evaporation Retardant**

## **Reduce Rapid Moisture Loss from Concrete** with EVAPRE from W. R. MEADOWS

**EVAPRE** evaporation retardant is an economical, high quality, water-based compound. It is specifically designed to form a thin monomolecular film to reduce rapid moisture loss from the

concrete surfaces prior to curing. EVAPRE provides a significant aid in producing high-quality

concrete flatwork. Rapid evaporation of water is retarded, slab surface conditions are normalized,

and workers can adhere more closely to established finishing schedules. EVAPRE is also

**EVAPRE** effectively combats and minimizes the effects of rapid-drying conditions such as low humidity, low dew point, high winds, direct sunlight, hot weather, heated concrete, or placement

of concrete in a heated enclosure or interior area during cold weather. The protective film shield

**EVAPRE** significantly reduces plastic shrinkage and cracking, wind crusting, stickiness, sponginess, which often cause poor and uneven surface texture.

These conditions result when the hydration is more rapid than the movement of bleed water to the surface.

FEATURES/BENEFITS

VOC-compliant.

- Significantly reduces plastic shrinkage and cracking caused by evaporation in low humidity, high temperatures, and high winds.
- Allows use of lower slump and lower water: cement ratio concrete.
- Provides smooth and durable concrete flatwork.
- Reduces wind crusting, stickiness, and sponginess, which often cause poor and uneven surface texture.
- Allows finishing crews to adhere to established schedules.

disappears as soon as the concrete is no longer plastic.

- Reduces overall cost because timing of finishing operations is less critical.
- VOC-compliant.
- Available in exclusive, easy-to-use, 45-ounce containers.
- Ready to use version also available EVAPRE-RTU.
