MEL-DRAIN™
PREFABRICATED DRAINAGE SYSTEM
Combine MEL-DRAIN with all W. R. MEADOWS waterproofing materials to create a total moisture protection system
Drainage plays a critical role in a complete moisture protection system. Native soil is typically comprised of multiple layers that determine the ability of water to move through the soil. Low permeability soil layers can trap water and create hydrostatic pressure against below grade walls.

MEL-DRAIN enhances our moisture protection systems. By design, MEL-DRAIN protects the membrane and provides an uninterrupted flow path to bypass the problem soil layers.

For architects, engineers, and design teams, keeping water out of a below-grade structure is important for maintaining indoor air efficiency, as well as helping to reduce the formation of mildew and mold. Whenever a below-grade waterproofing membrane is used, such as MEL-ROL from W. R. MEADOWS, MEL-DRAIN should also be used. The MEL-ROL and MEL-DRAIN system creates an effective waterproofing barrier that not only resists the intrusion of water, but also directs it away from the building towards reservoirs and water tanks.

**Features/Benefits**
- High flow capacity, without clogging/Relieves hydrostatic pressure buildup.
- High compressive strength/Dependable, long life performance.
- Easy to install; durable under job site conditions/Lower total installed cost.
- Chemically resistant to all naturally occurring soil conditions/Wide variety of applications.
- Provides added protection for waterproofing materials/Enhances waterproofing performance.
- Part of a complete W. R. MEADOWS moisture protection system/Worry-free, single-source solution.

**Whatever Your Needs... We Have the Solution**

MEL-DRAIN is a dimple-raised, molded polystyrene sheet bonded to high strength polypropylene fabric. This geocomposite allows the passage of moisture through the fabric while preventing fine soils from entering the drainage channel. Various drain designs are available, depending on soil pressure and flow specifications. (An optional polyester backing film is available when used in conjunction with flexible waterproofing material.) The family of MEL-DRAIN products provides excellent protection in vertical, horizontal, and site applications.

Used in conjunction with a total W. R. MEADOWS moisture protection system, MEL-DRAIN is the ideal choice for a prefabricated drainage system.

- Commercial buildings
- Underground parking
- Retaining walls
- Basement walls
- Site drainage
- Plaza decks
- Earth-sheltered homes

In fact, whenever a waterproofing membrane from W. R. MEADOWS is used, MEL-DRAIN should be applied as well to create a continuous prefabricated drainage system.
COMPATIBLE WITH MEL-DRAIN

A proper installation of any of these products is not complete without the use of MEL-DRAIN.

MEL-PRIME™

Adhesive
MEL-PRIME is a solvent-based, ready-to-use adhesive designed for use with W. R. MEADOWS membrane systems, such as PRECON. MEL-PRIME simultaneously prepares and dustproofs new, old, vertical and horizontal surfaces in one easy, economical operation. Several different formulations are available, such as water-based and low-VOC.

MEL-ROL®

Rolled, Self-Adhering Waterproofing Membrane
MEL-ROL waterproofing system is a flexible, versatile, dependable, roll-type waterproofing membrane. It is composed of a nominally 56 mil thick layer of polymeric waterproofing membrane on a heavy duty, four-mil thick, cross-laminated polyethylene carrier film. The two components are laminated together under strict quality-controlled production procedures.

MEL-DRAIN is compatible with the entire line of W. R. MEADOWS waterproofing membranes. In fact, every effective waterproofing application should utilize MEL-DRAIN to help direct water away from foundation walls, ensuring a complete moisture protection system. The following waterproofing membranes from W. R. MEADOWS are fully compatible with MEL-DRAIN:

MEL-ROL LM

Single-Component, Water-Based, Polymer-Modified, Cold-Applied, Waterproofing Membrane
MEL-ROL LM is a single-component, polymer-modified, cold-applied, water-based, liquid waterproofing membrane ideal for below-grade vertical seamless waterproofing applications. We have taken the same high quality rubber polymers found in W. R. MEADOWS successful MEL-ROL “peel and stick” membrane and converted them into a heavy-bodied, high solids, quick drying liquid membrane.

POINTING MASTIC

Cold-Applied, Single-Component Polymeric Sealing Compound
POINTING MASTIC is a pre-mixed, cold-applied, polymeric, single-component sealing compound for adhesive bonding of MEL-DRAIN. It offers excellent cohesive and adhesive qualities. Once applied, it provides excellent adhesive and bonding strengths. POINTING MASTIC cures to form a tough, flexible membrane.
HYDRASTATIC™ 836

Cold-Applied, Single-Component Waterproofing

HYDRASTATIC 836 is a cold-applied, solvent-free, single-component waterproofing compound. It does not shrink, has a low volatile organic compound (VOC) content, and has a very low odor. It will not crack in extreme cold or slump due to softening at high temperatures.

PRECON®

Pre-Applied/Underslab Waterproofing Membrane

PRECON is a composite sheet membrane comprised of a non-woven fabric, elastomeric membrane, and W. R. MEADOWS’ exclusive, patented plasmatic core (U.S. Patent No. 7,179,761). The plasmatic core is a seven-layer matrix designed for toughness and provides the lowest water vapor transmission (WVT) rating on the market. Once concrete is poured against PRECON and the concrete cures, a mechanical bond forms that secures the concrete to the membrane.

HYDRASTOP™ SA

Pre-Applied Waterproofing Membrane

HYDRASTOP SA is a composite, self-adhered sheet membrane comprised of a non-woven fabric, elastomeric membrane, and coated release paper. Once concrete is poured against HYDRASTOP SA and the concrete cures, a mechanical bond forms that secures the concrete to the membrane. The HYDRASTOP SA system is comprised of the HYDRASTOP SA membrane as well as MEL-DRAIN™ composite drainage board from W. R. MEADOWS.

HRM 714

Hot-Applied Rubberized Waterproofing Membrane

HRM 714 hot-applied rubberized asphalt waterproofing membrane is a 100% solids blend of asphalts, synthetic rubber polymers, and filler formulated to provide toughness with flexibility and low moisture vapor permeance.

With MEL-DRAIN, you’ll always get the right product to fit the needs of your job.

W. R. MEADOWS offers a complete line of MEL-DRAIN prefabricated drainage products that will enhance and extend the performance life of your waterproofing membrane. By design, MEL-DRAIN products not only protect the membrane from installation stresses, but will also eliminate hydrostatic pressure from accumulating by providing an uninterrupted flow path for water to bypass problem soil layers. MEL-DRAIN sheet products combined with MEL-DRAIN TOTAL-DRAIN work together as a complete drainage system that offers unmatched protection and performance.

The MEL-DRAIN TOTAL-DRAIN™ system combines any regular MEL-DRAIN sheet drain section with the unique TOTAL-DRAIN section. In the TOTAL-DRAIN system, the regular sheet drain performs its normal function of water collection, while the TOTAL-DRAIN section provides both water collection and a high-profile section for water flow to the designed drainage exits.

The TOTAL-DRAIN system provides three advantages over the use of perforated pipe and stone:

- The high-profile flow section has a larger open area than does perforated pipe to accept high flows from the sheet drain and surrounding soil.
- The TOTAL-DRAIN section, with its manufactured transition between sheet drain and high-profile section, provides a secure flow path, which is not dependent on field installation.
- The system is fast and easy to install. Eliminates select backfill required to give perforated pipe strength. Standard connectors and corner guards are available.

TOTAL DRAIN COLLECTION SYSTEM

MEL-DRAIN TOTAL DRAIN PRODUCT

water entering a drainage core
MEL-DRAIN is simply unrolled onto the wall or waterproofing material. POINTING MASTIC or MEL-PRIME™ from W. R. MEADOWS can be used to adhere MEL-DRAIN to the substrate. MEL-DRAIN is easily cut with construction knives or scissors and compatible in both vertical and horizontal applications. Make sure to request free samples before the start of your project.

**MEL-DRAIN storage and handling directions**

For storage of MEL-DRAIN at the job site and in the warehouse, please follow these requirements.

- Care must be taken during unloading process to ensure materials are not damaged.
- Materials shall remain in original packaging until time of installation.
- Store materials in protected environment until time of installation.
- Materials not shipped in UV-resistant bags must be stored indoors or under separate UV-protective cover to protect materials from exposure to direct sunlight.
- UV-resistant bagged materials may be stored in outdoor UV-exposed environments for a cumulative maximum of 180 days.
- Limit unpackaged material UV exposure to a cumulative maximum of 14 days during installation.
- Do not install materials during high wind events.
- Do not install materials when ambient temperatures are below 20° F (-6.7° C) or above 100° F (37.8° C).
- Do not expose materials to chemicals that are strong acids, strong bases, or high in solvents content.
- Protect materials from damaging due to flames, on-site construction and other environmental conditions.
MEL-DRAIN is made with recyclable material and can contribute to many LEED credits.

More and more often today, earning LEED credits is a critically important part of the job. To that end, W.R. MEADOWS stands ready to help, not only with recyclable material, but with support and advice on effective prefabricated drainage systems. Visit our website, and you’ll find a LEED Credit Calculator. We also offer AIA-accredited lunch-and-learn programs. At W. R. MEADOWS, we always stand ready to help our contractor customers.

MEL-DRAIN and MEL-DRAIN TOTAL-DRAIN LEED CREDITS

**LEED 2009 (v3.0)**

- SSC6.1: Stormwater Design – Quantity Control
- SSC6.2: Stormwater Design – Quality Control
- WEc1: Water-Efficient Landscaping
- WEc2: Innovative Wastewater Technologies
