

PERMINATOR® HP

15 Mil Underslab Vapor Barrier (High Puncture Resistance)

Great puncture resistance while maintaining one of the lowest perm ratings on the market.

PERMINATOR HP provides the vapor barrier industry with a highly effective, economical choice for helping to reduce the penetration of moisture and water vapor through the slab into the structure.

PERMINATOR HP underslab vapor barrier is a new generation of polyolefin-based resin/chemical technology that allows dramatically greater puncture resistance while maintaining one of the lowest perm ratings in the market. PERMINATOR HP helps to reduce fungus, mildew, mold growth, and also reduces radon gas from entering the structure.

PERMINATOR HP is tough enough to withstand normal construction jobsite conditions and traffic. It will not crack, puncture, snag, split, or tear easily.

PERMINATOR HP prevents uncontrolled moisture from entering the slab allowing the slab to maintain the maximum slab moisture emission rate and relative humidity level as allowed by flooring manufacturer's specifications.

FEATURES/BENEFITS:

- High puncture resistance; maintains integrity on the jobsite
- Reduces radon gas intrusion
- Installs quickly and easily over tamped grade, no gravel, fill, or sand needed
- Rolls require fewer seams in application
- VOC content is 0 g/L
- Can also be used as a protection course for waterproofing membranes
- Made in America
